TITLE : BRIGHTNESS ADJUSTABLE DEVICE

ABSTRACT : PROBLEM TO BE SOLVED: To provide a brightness adjustable device capable of improving the servicesability for increasing the uses of playing devices, musical instruments and other various devices.

SOLUTION: A mole head 4a is covered with a packaging part 10 and a sheet part 11 made of a flexible transparent material. An elastic and phototransmittable movable body 9 is made movable in upward and downward directions by elastic-deforming a leg part 14. When switches 17, 9c are turned on, a light emitting body 16 is energized to transmit a barrel part 13, a head 12 and the sheet part 11 to be observed. When the mole body is knocked, the movable body 9 is shifted downward for changing the distance between the head 12 and the light emitting body 16, so that the apparent brightness observed through the head 12 may be varied.
